

Figure 1: Kaplan-Meier survival plot showing time to progression-free survival (PFS) for two groups: EFS (blue line) and EFS+ (orange line). The x-axis represents Time (days) from 0 to 4000. The y-axis represents survival probability. The EFS group shows a rapid decline in survival, reaching near zero by 1000 days. The EFS+ group shows a more gradual decline, reaching near zero by 4000 days. The plot includes a legend in the top right corner and a text annotation 'EFS P = 0.166' in the bottom left corner.

The chart displays the number of EFS instances over a 4000-day period for two regions: EUR and non-EUR. The EUR series (orange) starts at 15 instances at day 0 and decreases to 3 instances by day 1500, remaining constant thereafter. The non-EUR series (blue) starts at 8 instances at day 0 and decreases to 0 instances by day 1500, remaining at 0 for the rest of the period.

Time (days)	EUR	non-EUR
0	15	8
500	9	5
1000	4	1
1500	3	0
2000	3	0
2500	3	0
3000	3	0
3500	3	0
4000	3	0
